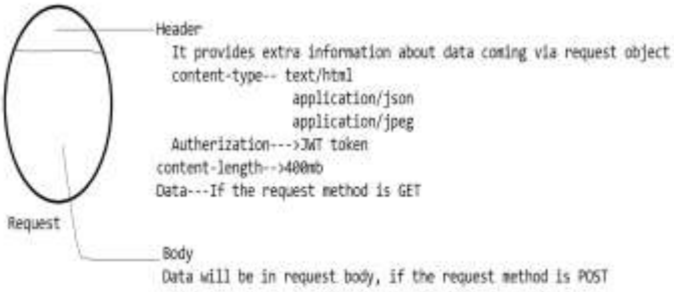
Request

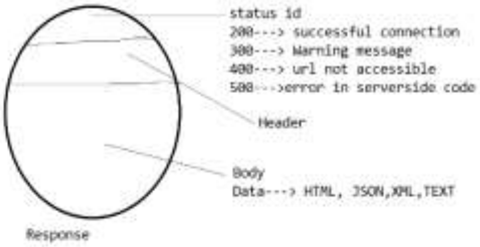


Header
It provides extra information about data coming via request object
content-type-- text/html
application/json
application/jpeg
Autherization--->JWT token
content-length-->400mb
Data---If the request method is GET

Request

Body
Data will be in request body, if the request method is POST

Response



status id
200---> successful connection
300---> Warning message
400---> url not accessible
500--->error in serverside code
Header
Body
Data---> HTML, JSON,XML,TEXT
Response

HTML(Hypertext Markup Language)

TAGS----- <h1> </h1>

Web application are designed as a group of web pages, every web page is one HTML file

Web pages are of 2 types

1. Static Web Page--- is designed by using only HTML, example -→tutorial site, news paper
2. Dynamic Web Page---It is designed by using HTML,CSS,Javascript,JQuery and some server side technology

Header tags

6 header tags are in html, h1 to h6

url

file:///D:/Web%20programming/IACSD%20Mar%2025/headerdemo.html
Protocol://ip address:port/filename
http://127.0.0.1:5500/headerdemo.html

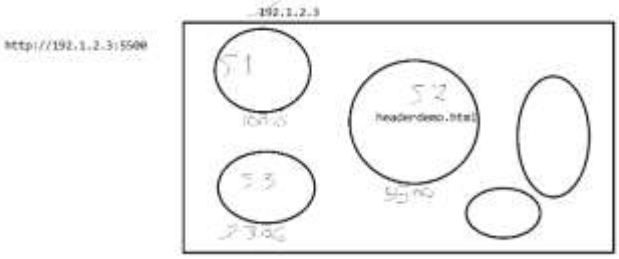
Visual studio code

Download and install from the following site

https://code.visualstudio.com/download

view>extension> install live server extension

view>explorer and then use go live to start html page



Header tags

There are 6 header tags	<h1> , <h2>, <h3>,<h4> , <h5>, <h6>
